

## Key idea:

- Inject causal graph edges to guide reasoning
- Compare zero shot, few shot, and chain of thought
- Test text, graphs, and text and graph

## Takeaways:

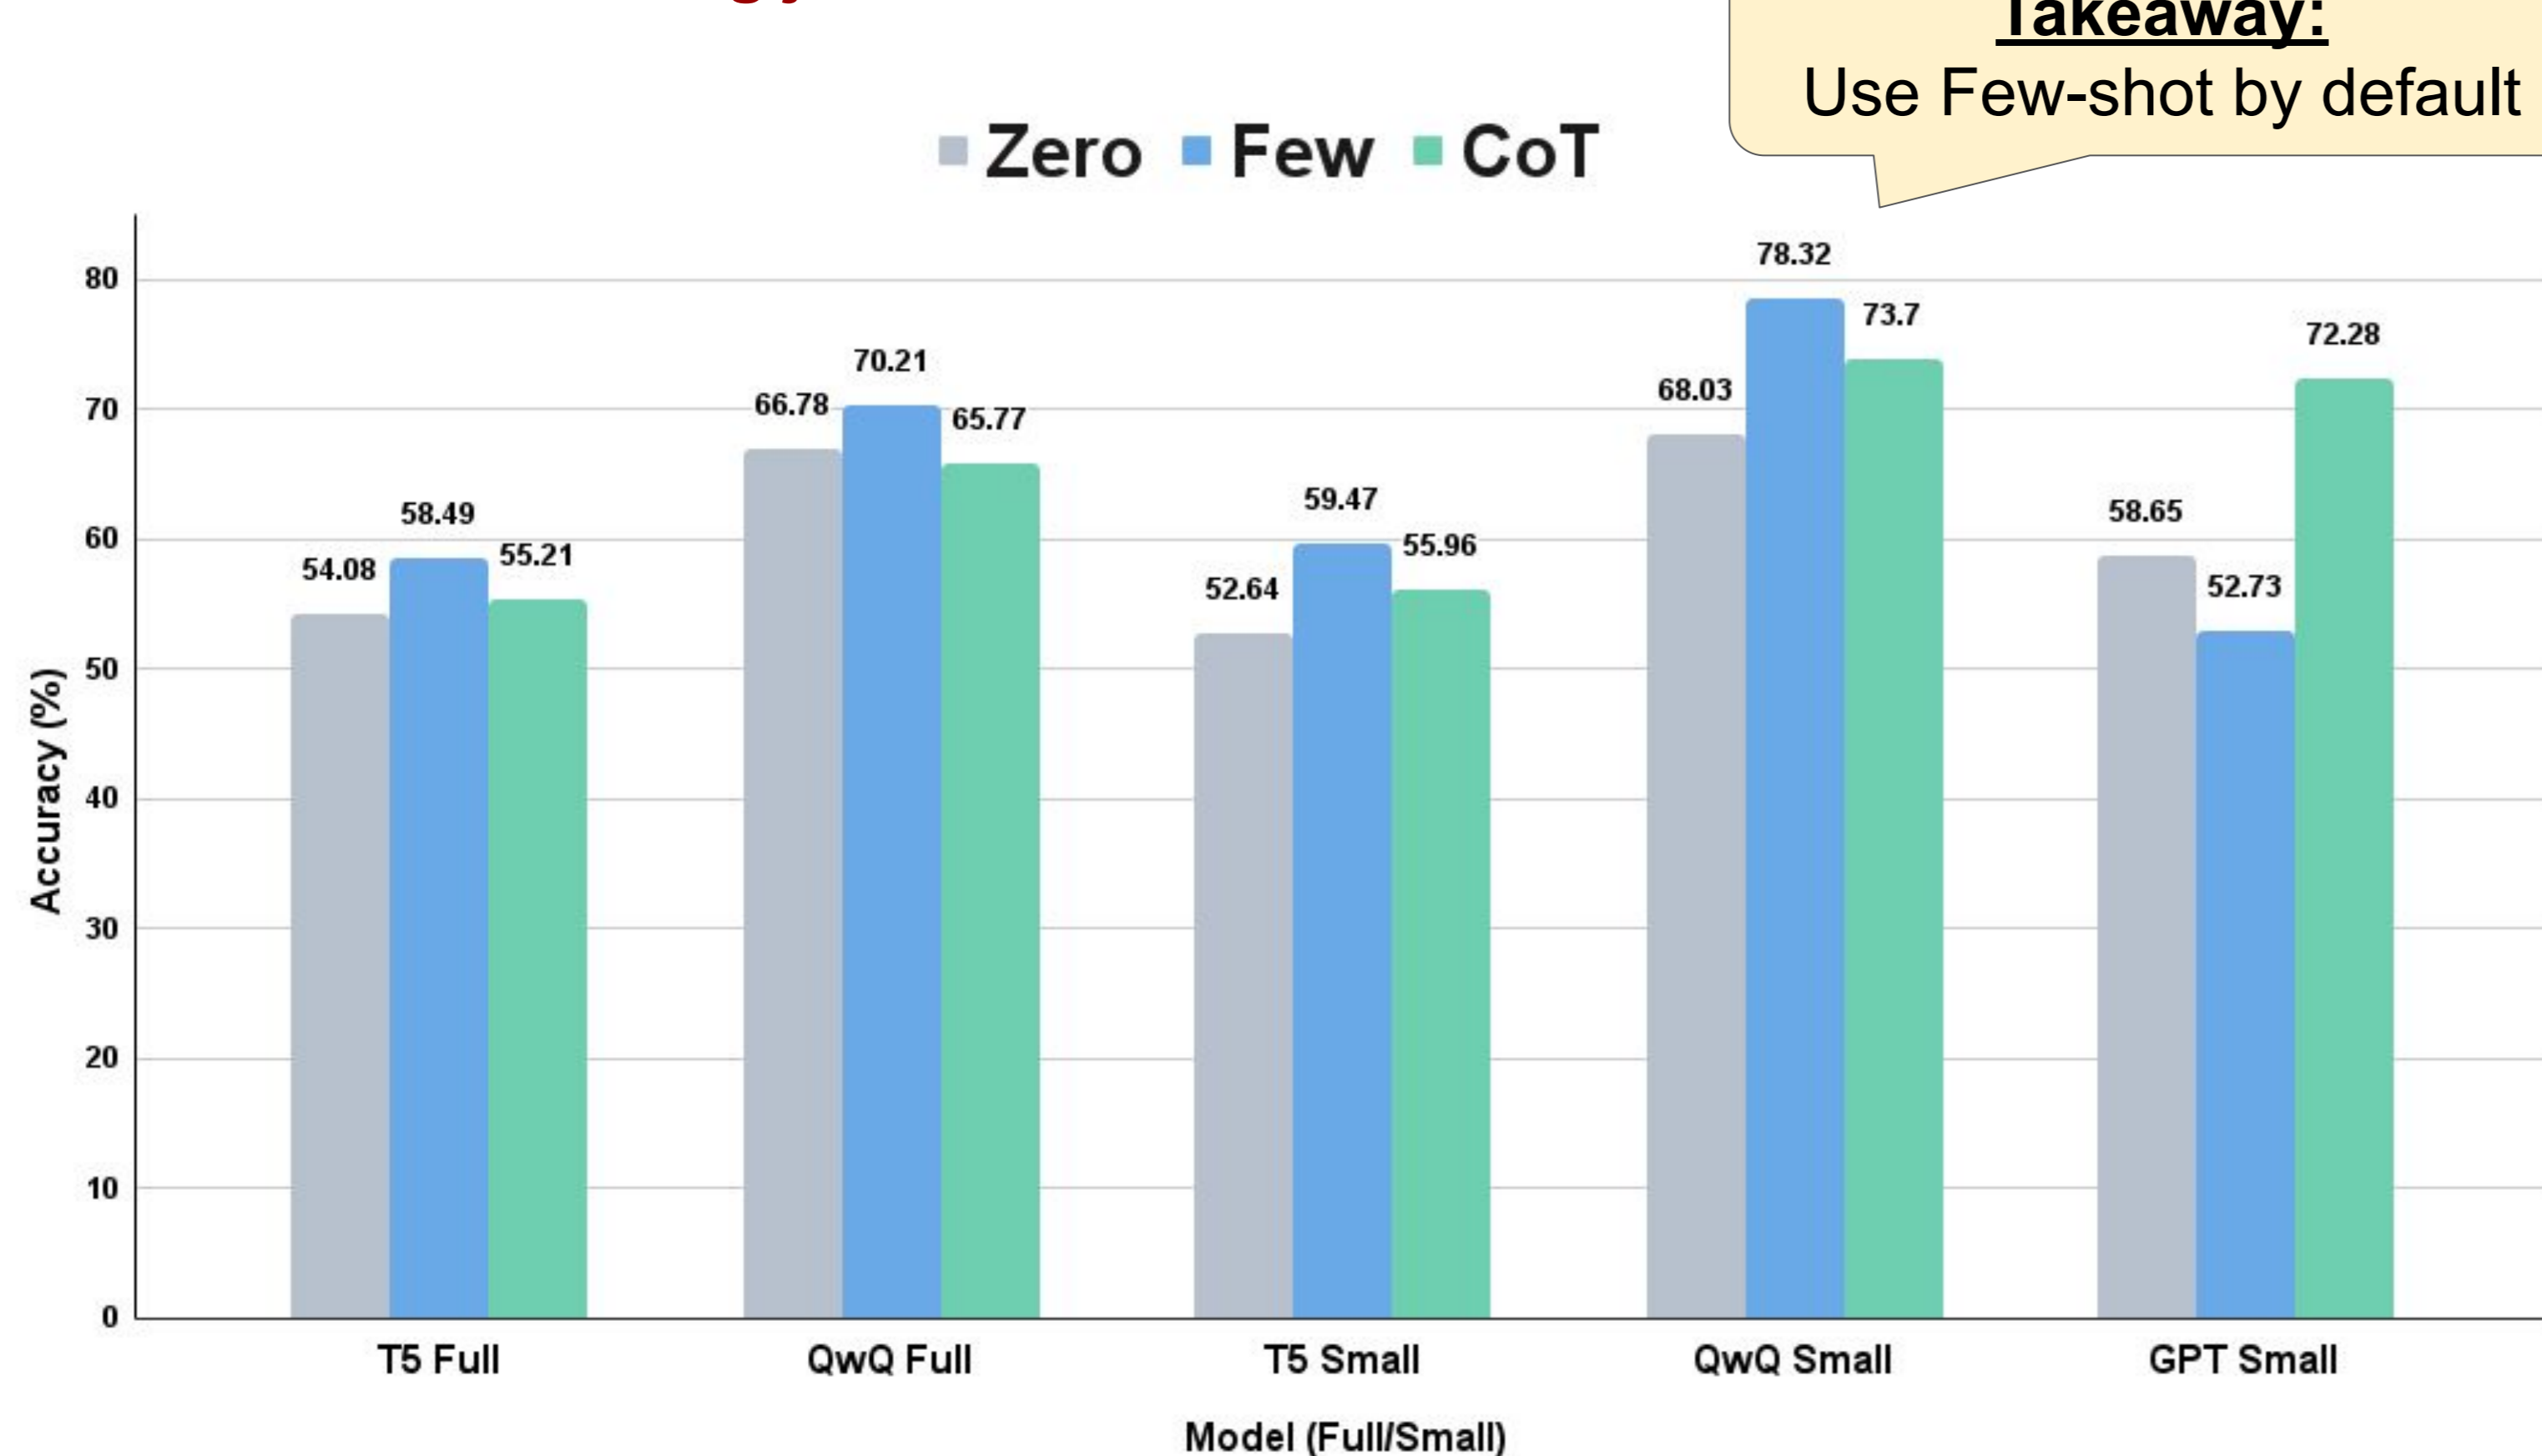

- Structure helps most in zero shot prompts
- CoT + graph offers the highest upside
- Biggest wins on causal and temporal questions

## TAG-EQA PIPELINE

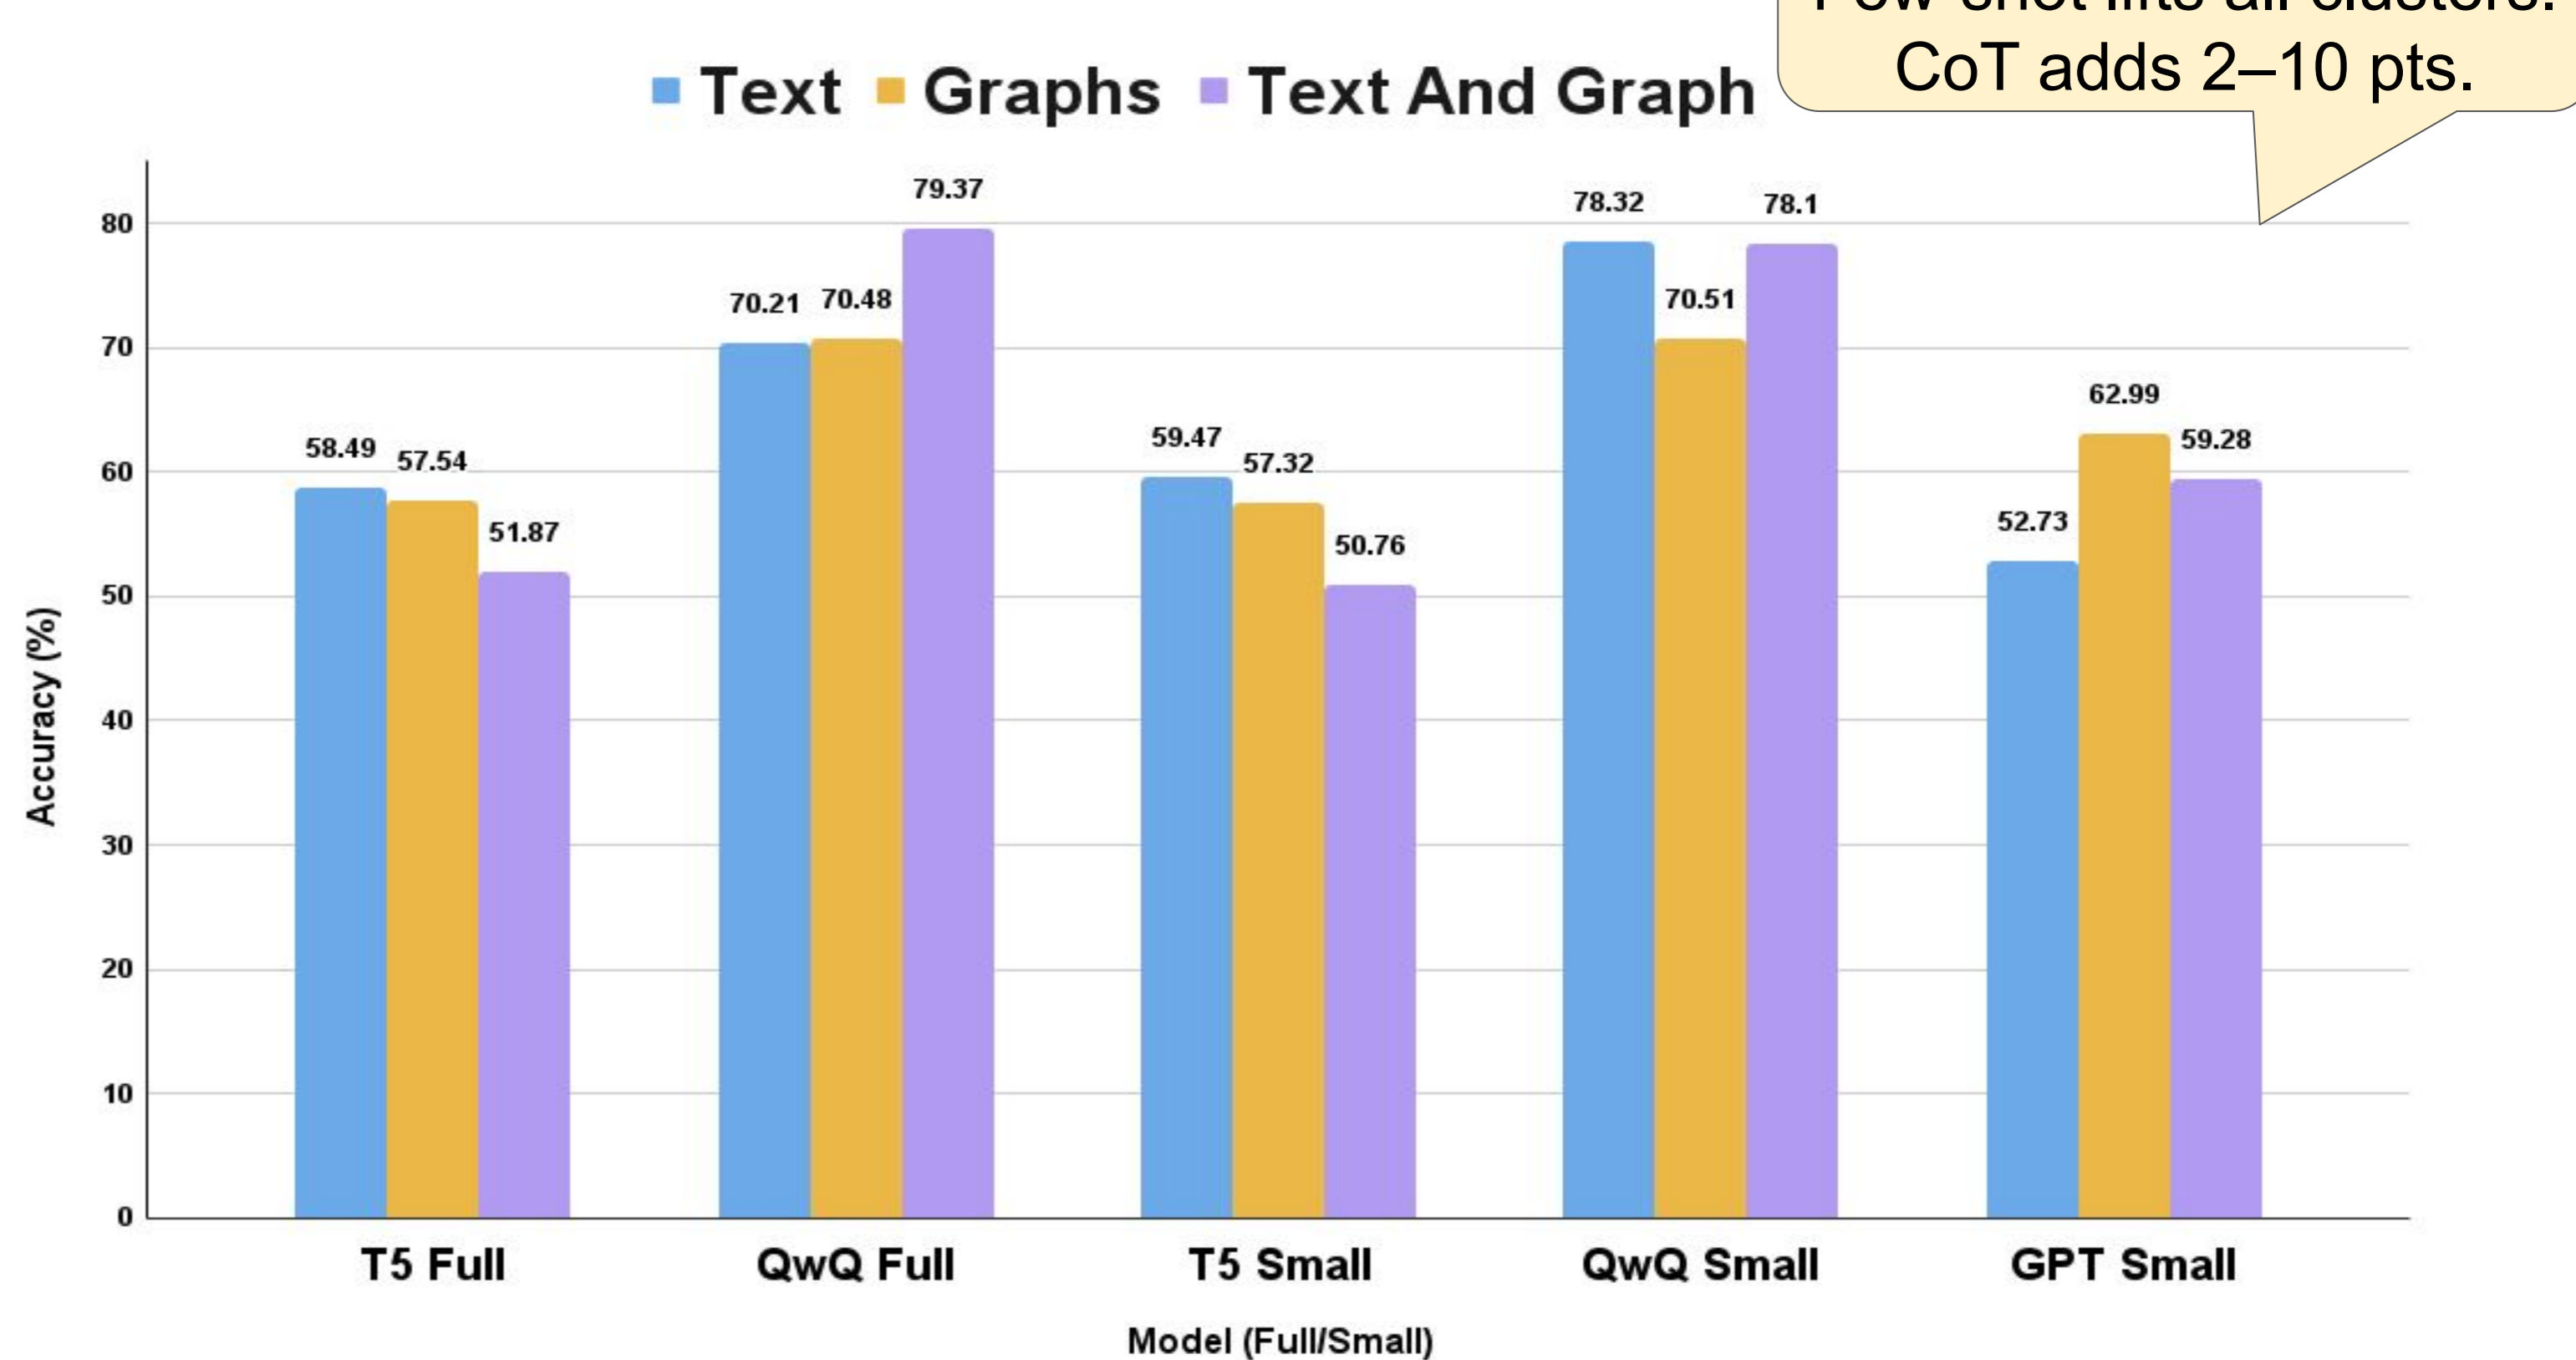

## RESULTS

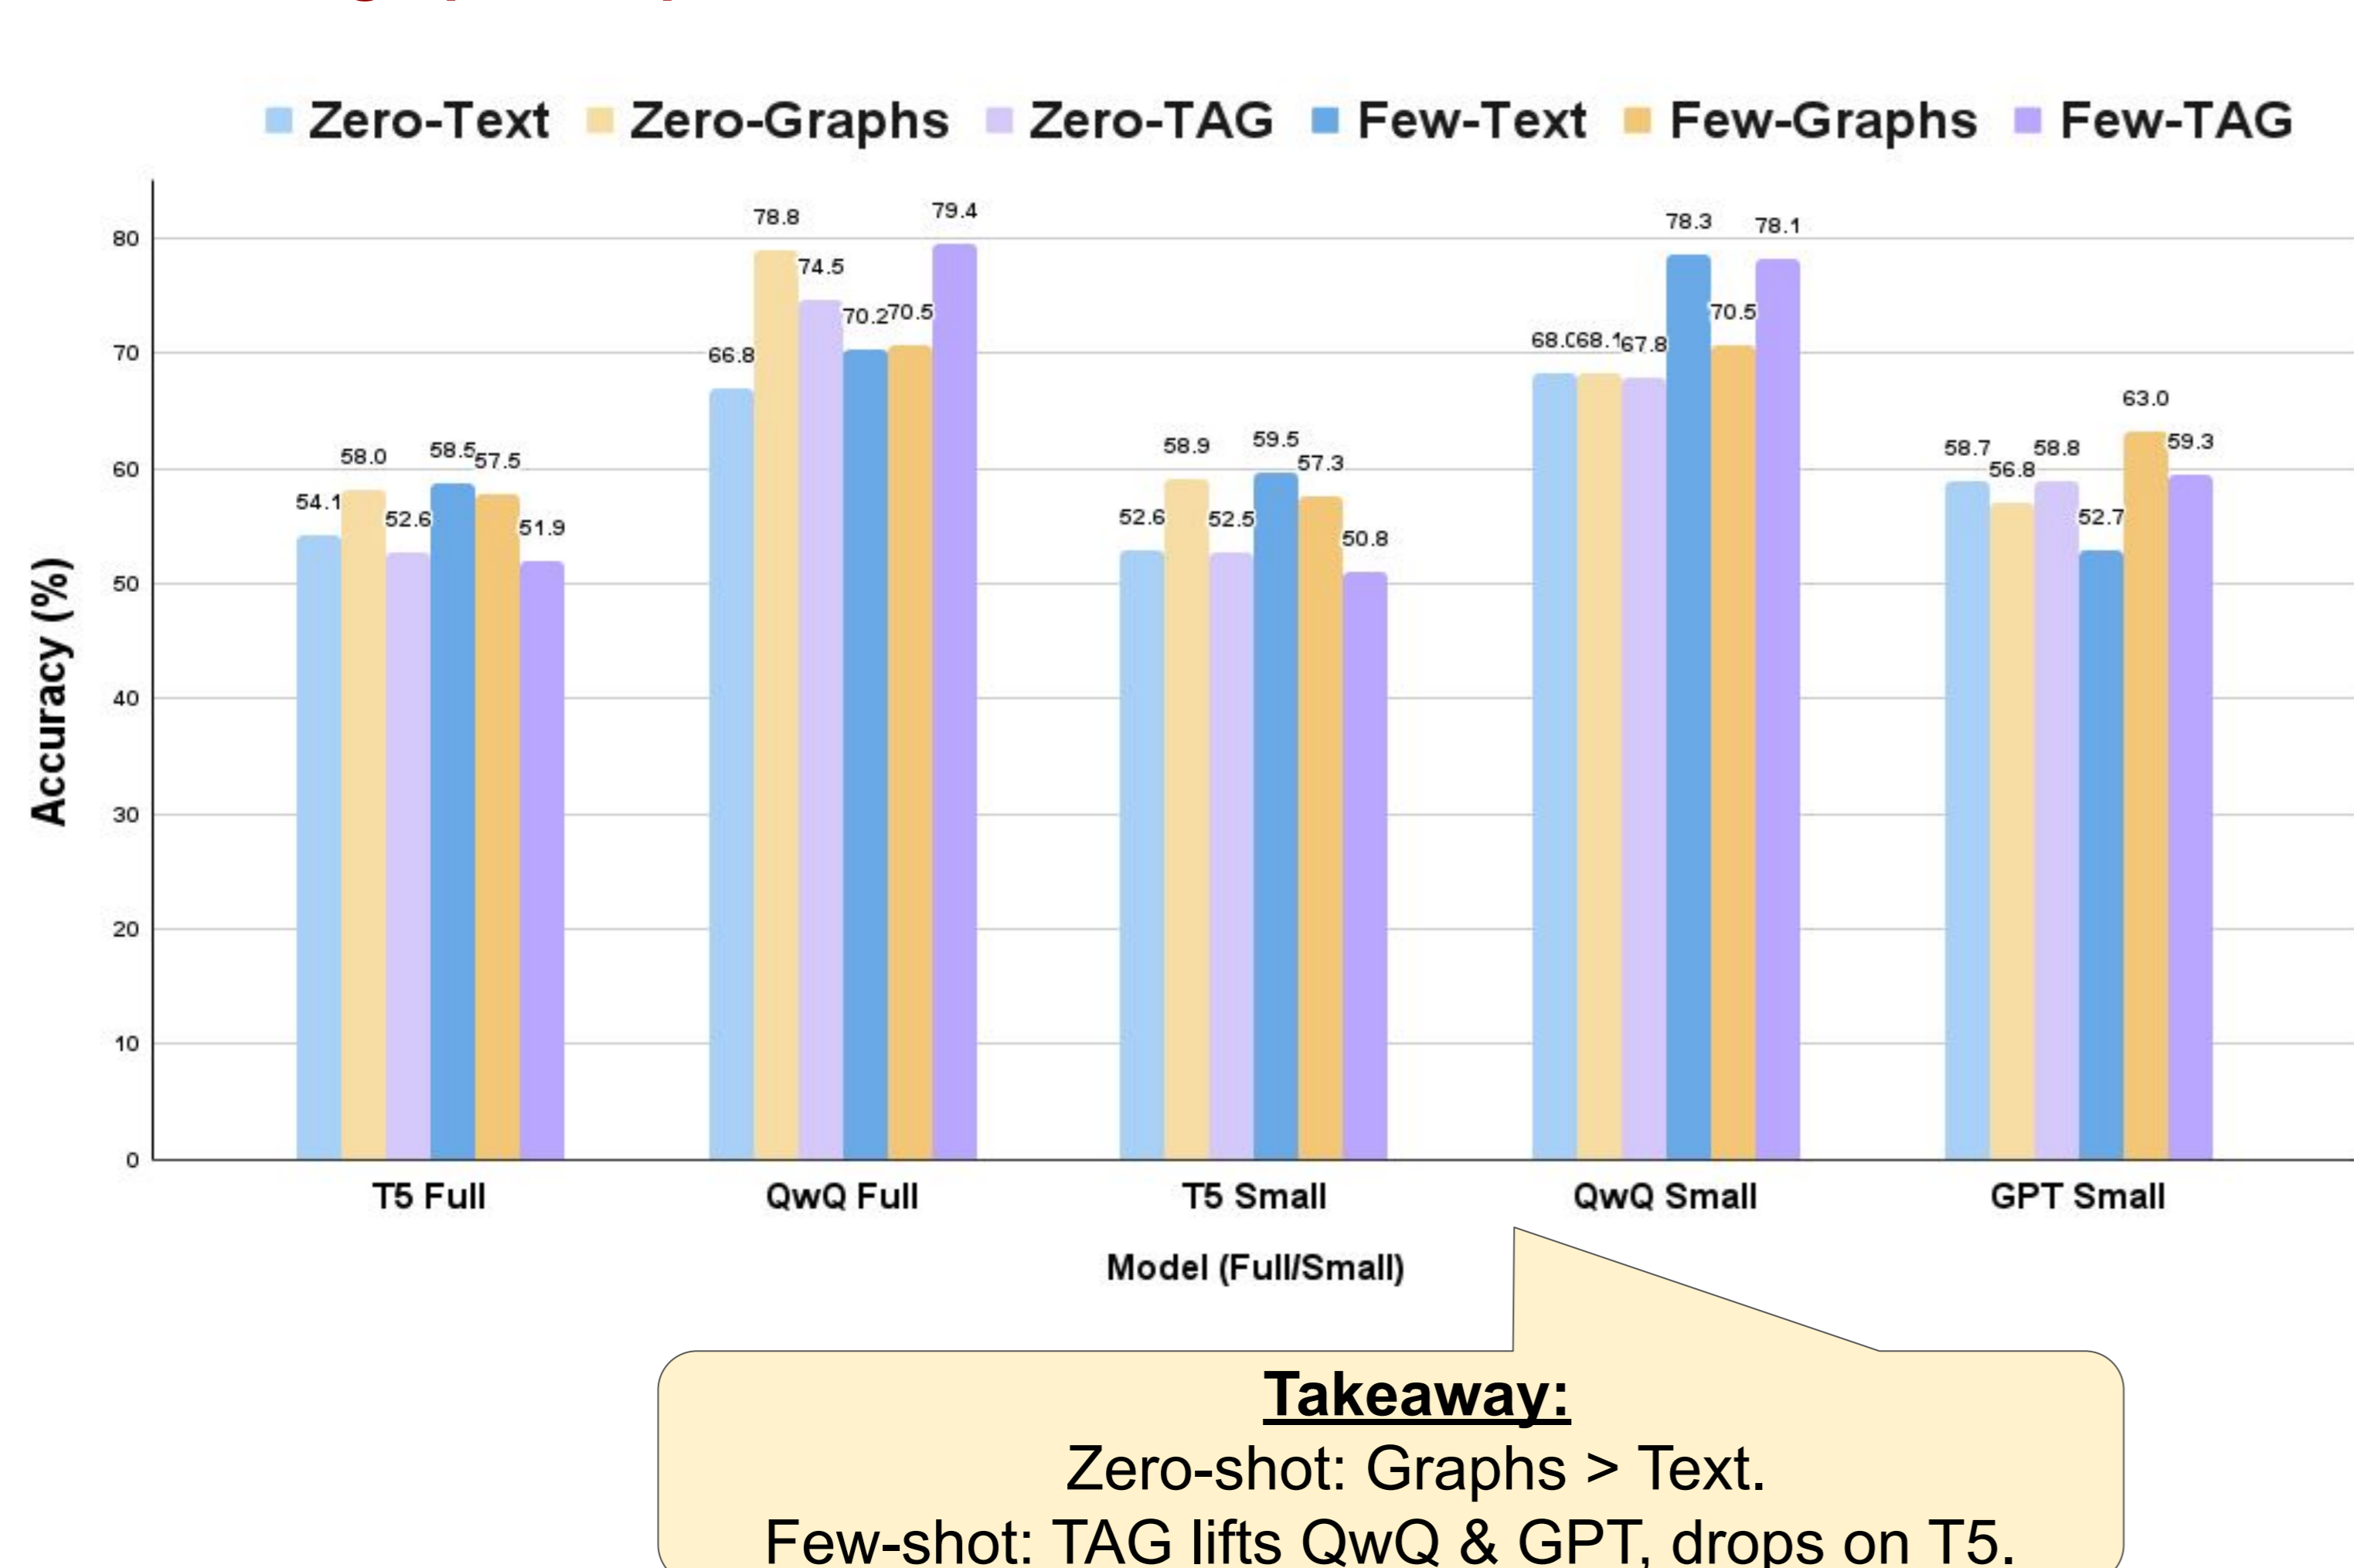

**RQ 1: Does reasoning (CoT) improve performance over Zero or Few-shot using just text?**

**RQ 3: When reasoning is used, does adding graphs help or hurt?**

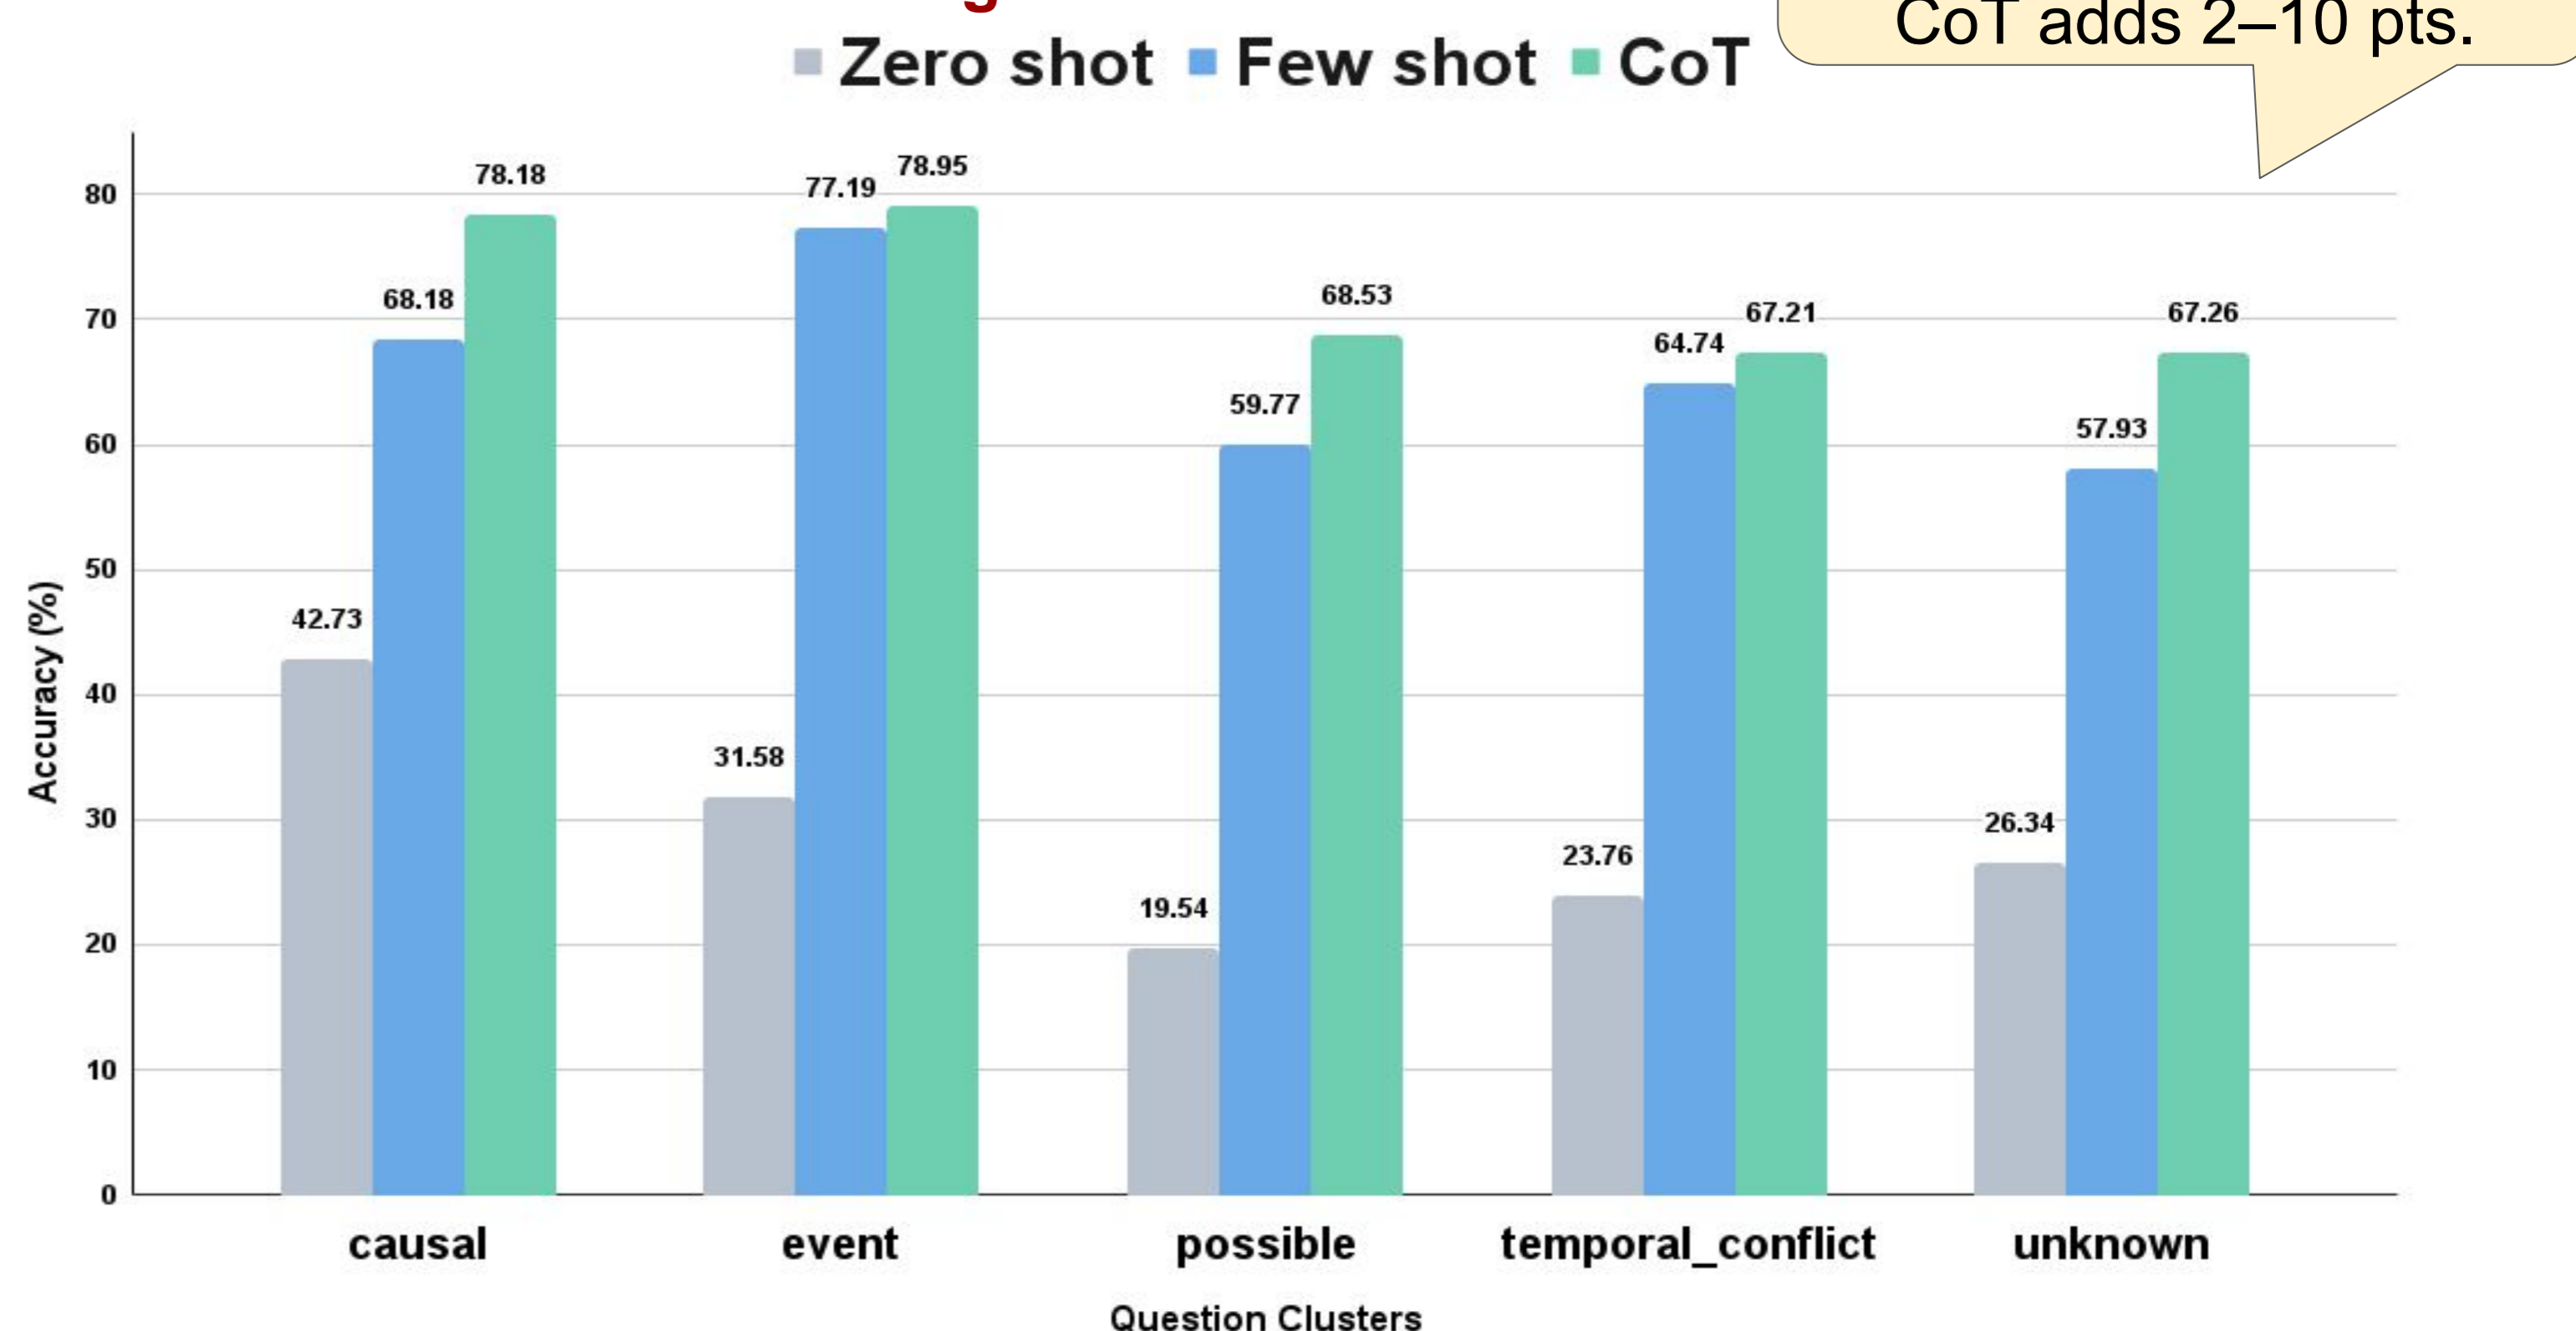

**RQ 2: Are graphs helpful when used alone or combined with text?**

**RQ 4: Which prompting strategy works best for each model?**

MODEL	DATASET	BEST CONFIG	ACCURACY (%)
T5	Full	Few-shot + Text	58.49
QwQ	Full	Few-shot + Text And Graph	79.37
T5	Small	Few-shot + Text	59.47
QwQ	Small	Few-shot + Text	78.32
GPT**	Small	Zero-shot + Text	72.28

**RQ 5: Which question types benefit most from structure and reasoning?**

All results are on TORQUESTRA dataset.

Full size data = 53,061. Small size data = 1,024 .
